

60130-984

IN THE CLAIMS

1. (TWICE AMENDED) A motorized reduction gear comprising:

B2
a rotor provided with a rotor shaft bearing a commutator including a body having an inner surface mounted on said shaft and an opposing outer surface, and a reduction gearbox containing a gearwheel engaged with a worm of said shaft, and a magnetic ring mounted on said shaft in order that a number of rotations of said shaft can be counted, and wherein said magnetic ring is attached on said outer surface of said body of said commutator.

- B3
4. (TWICE AMENDED) The motorized reduction gear as recited in Claim 1, wherein said magnetic ring is housed in an annular recess located at an end of said commutator for retaining a plurality of electrical connectors of said rotor.

- B4
6. (TWICE AMENDED) The motorized reduction gear as recited in Claim 1, wherein said magnetic ring is attached to one end of said commutator by at least two screws substantially parallel to an axis of said commutator.

- B5
8. (NEW) The motorized reduction gear as recited in claim 4 wherein said end of said commutator is free of hooks.

REMARKS

Claims 1-8 remain in the application. Claims 1, 4 and 6 have been amended and claim 8 has been added.

Applicant affirms election to prosecute the invention of species III, claims 1, 4 and 5. Figure 1 has also been amended to include the legend "prior art." The title of the invention has also been amended to more clearly indicate the invention
